SOFTWARE SPECIFICATIONS

The Smartfox system is built with PHP version 7.2, an open-source web scripting language. Data is stored in a MySQL database, also open source. The user interface was developed in HTML5, CSS3, JavaScript, and uses Bootstrap as a front-end framework.

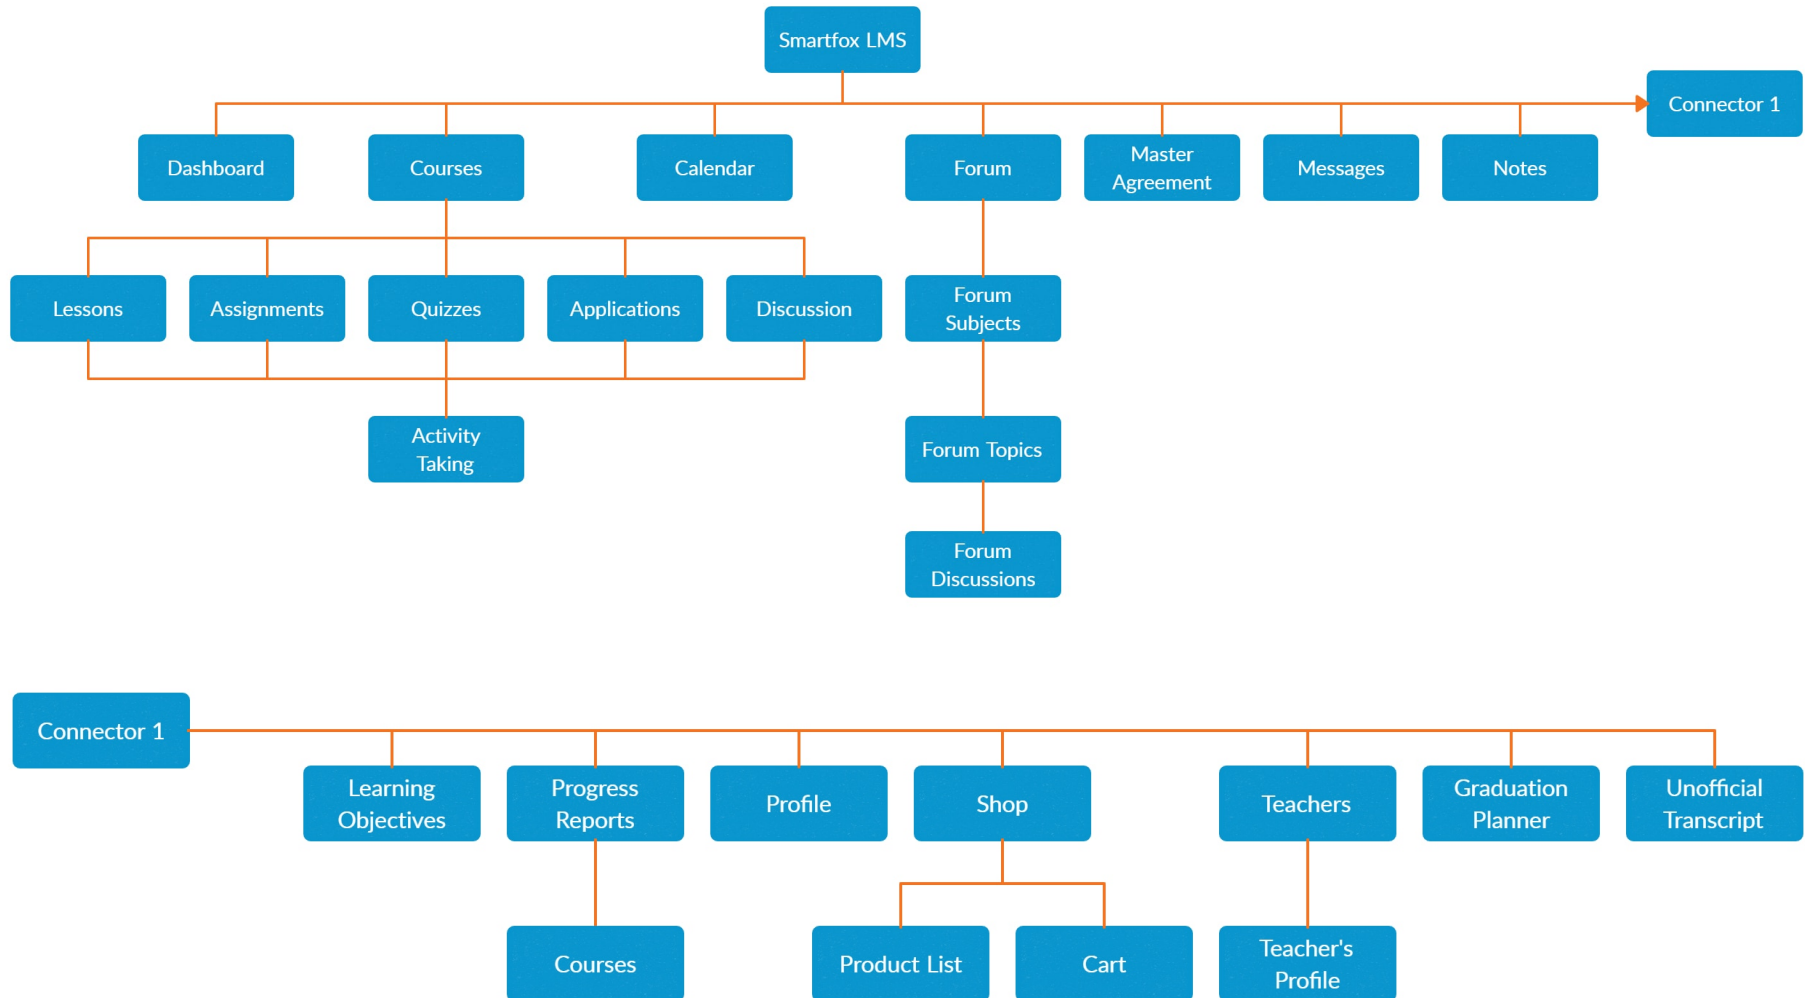

Smartfox employs components from standard and commonly accepted libraries such as jQuery for Javascript, CKEditor, DataTables, fullCalendar, and many more.

It also integrates with third-party service providers such as Twilio, Zoom, Google, and others. The application will be able to run on any web server that supports PHP 7 and has a MySQL database.

The application code uses Git version control, and all commits are being archived in a designated private repository. Source code is being stored on a mutually agreed platform.
